

SEO Mini Project Report

1. Niche Selection and Justification

****Niche:**** Budget Smartphones

Add screenshot: Ubersuggest search for niche demand → [INSERT SCREENSHOT HERE]

Reason – The budget phones segment is never cold and unpopular, especially in India where over 60% of phones sold are under ₹20,000. People constantly look for cheap but quality deals, generating continuous demand for reviews, comparisons, and buying guides.

Competition is moderate, and by targeting sub-niches like ‘best phones under 10,000’ or ‘best 5G phones under 15,000’, long-tail keywords become highly achievable. This niche also has strong monetisation potential via affiliate marketing (Amazon, Flipkart, Croma) and seasonal sale traffic. Overall, it aligns perfectly with SEO-focused content creation.

2. Keyword Research

Add screenshot: Ubersuggest keyword tool results → [INSERT SCREENSHOT HERE]

The following keywords were extracted using Ubersuggest:

Keyword	Search Volume (IN)	KD	Intent	Competitors
best budget smartphones	22000–27000	32	Informational/Transactional	TechRadar, Gadgets360, Digit
best phones under 15000	80000–110000	28	Transactional	MySmartPrice, 91mobiles
best phones under 10000	60000–75000	25	Transactional	Amazon, Flipkart blogs
best 5g phones under 15000	50000–65000	30	Transactional	91mobiles, Gizbot
budget 5g smartphones	12000–18000	26	Informational	Tech blogs, YouTube

3. Keyword Selection

****Primary Keyword:**** best phones under 15000

Reason – High volume, moderate KD, strong transactional intent.

****Secondary Keywords:****

- best phones under 10000
- best 5g phones under 15000
- best camera phones under 15000
- budget smartphones
- affordable smartphones

4. Longtail & LSI Keywords

Keyword	Search Volume	Intent	Competition	Relevance Score
best 5g phones under 12000	18000–25000	Transactional	Medium	10
best gaming phones under 15000	22000–30000	Transactional	Medium	9
best camera phones under 12000	12000–18000	Transactional	Medium	9
best battery phones under 15000	9000–14000	Transactional	Low-Medium	8
best phones under 8000	20000–28000	Transactional	Medium	9

5. Domain Ideas

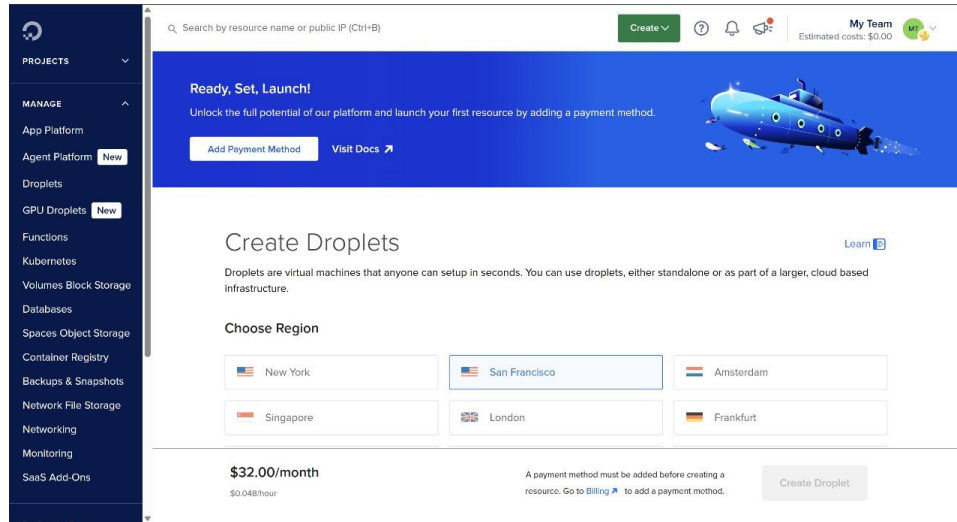

1. Tech15k.in
2. PhonesUnder15k.in
3. BestBudgetMobiles.in
4. 15kSmartphones.in
5. BudgetMobileGuide.in

****Final Domain:**** Techunder15k.shop

Reason – Short, brandable, price-focused, and niche-accurate.

Overview

Last step: Update your nameservers to activate Cloudflare

This is the last step to allow Cloudflare to speed up and protect your web traffic.

Review Cloudflare fundamentals

1. Log into your DNS provider (most likely your registrar)

Find your registrar on ICANN Lookup

If you purchased your domain through a reseller (e.g., Squarespace) or use a separate DNS provider, log into that account instead.

2. Make sure DNSSEC is off

Find and turn off the DNS security (DNSSEC) setting if it is on. You can re-enable it later through Cloudflare.

Provider-specific instructions

3. Replace your current nameservers with Cloudflare nameservers

This is unlikely to cause downtime, but you may skip this and check your DNS records first.

Find the nameservers section

DNS

DNS Setup: Full

WordPress One-Click Quickstart guide:
* <https://docs.litespeedtech.com/cloud/images/wordpress/>

In a web browser, you can view:
* The new WordPress site: <http://20.211.152.15>
* The phpMyAdmin: <http://20.211.152.15/phpmyadmin>

On the server:
* The default web root is located at /var/www/html
* You can get the MySQL root password and MySQL WordPress user password with command:
sudo cat /root/.db_password
* You can get the Web Admin admin password with the following command:
sudo cat /root/.litespeed_password
* The WordPress Cache plugin, LSCache, is located at
/var/www/html/wp-content/plugins/litespeed-cache
* The phpMyAdmin is located at /var/www/phpmyadmin
* A script will run that will allow you to add a domain to the web server and implement SSL.

System Status:
Load : 0.00, 0.00, 0.00
CPU : 0.731884%
RAM : 628/3869MB (16.24%)
Disk : 2/29GB (11%)

/usr/bin/xaauth: file /home/azureuser/.Xauthority does not exist.
To run a command as administrator (user "root"), use "sudo <command>".
See "man sudo_root" for details.

To visit your apps by domain instead of IP, please enter a valid domain.
If you don't have one yet, you may cancel this process by pressing CTRL+C and continuing to SSH.
This prompt will open again the next time you log in, and will continue to do so until you finish the setup.
Make sure the domain's DNS record has been properly pointed to this server.
Enter the root domain only. Then the system will add both the root domain and the www domain for you.
Your domain: techunder15k.store
The domain you put is: techunder15k.store
Please verify it is correct. [y/N] y

A screenshot of the WordPress installation 'Welcome' screen. At the top is the WordPress logo. The main heading is 'Welcome'. Below it, a paragraph reads: 'Welcome to the famous five-minute WordPress installation process! Just fill in the information below and you'll be on your way to using the most extendable and powerful personal publishing platform in the world.' The section 'Information needed' follows, with a subtext: 'Please provide the following information. Do not worry, you can always change these settings later.' There are five input fields: 'Site Title' (containing 'NBN Pi: Automation Workflows'), 'Username' (containing 'admin_n8npi'), 'Password' (containing '1oHtyk1n\$Vul&Rue1g123' with a 'Strong' strength indicator and a 'hide' button), 'Your Email' (containing 'n8nbuilds@protonmail.com'), and 'Search engine visibility' (with a checked checkbox 'Discourage search engines from indexing this site' and a note 'It is up to search engines to honor this request.'). At the bottom is a blue 'Install WordPress' button.

13. Reflection & Learnings

This SEO mini-project gave me a complete, hands-on understanding of how a real website is planned, built, optimized, and deployed. I learned how to choose a profitable niche, perform structured keyword research, and evaluate search intent to create content that aligns with user needs. Setting up a domain, configuring Cloudflare, and deploying a VPS taught me the technical side of website management, including DNS handling, SSL installation, and server security. Working with WordPress helped me understand themes, plugins, on-page SEO,

and performance optimization. Overall, this project strengthened both my technical and analytical skills, giving me confidence to manage and scale SEO-optimized websites independently in the future.
